

IN THE CLAIMS:

1. (currently amended) A method of displaying media information, comprising:
generating a three-dimensional image including a first planar surface and a second planar surface intersecting along an axis with the first planar surface being orthogonal to the second planar surface, the three-dimensional image that simultaneously displays only displaying an Electronic Program Guide (EPG) information for a plurality of television channels on a the first planar surface and only Personal Video Recorder (PVR) guide information for a plurality of video files on a the second planar surface, the first planar surface being orthogonal to said second planar surface; and

in response to a user input, ~~moving~~ rotating said three-dimensional image about said axis with the degree of rotation being selectable according to said user input to permit a user to select a face-on view of one of said planar surfaces while maintaining a partial view of the other surface to ~~change a viewpoint of said three-dimensional image to a detailed view of one of said planar surfaces while maintaining a partial view of the other planar surface~~ to provide contextual information to facilitate a user navigating between EPG information and PVR information.

2. (previously presented). The method of claim 1, wherein in response to a user input, one of said planar surfaces is rotated into a face-on view while maintaining a partial view of the other planar surface.

3-6. (cancelled)

7. (previously presented) The method of claim 2 wherein said second surface is moved into a face-on view, the method further comprising:

displaying objects representing drawers on said second planar surface;
responsive to a user input requesting information for a selected drawer,
opening said selected drawer orthogonally to said second surface and displaying information describing stored video files associated with said selected drawer.

8. (previously presented) The method of claim 7, wherein said displaying information describing stored video files comprises:
displaying at least one picture.

9. (original) The method of claim 7, wherein said displaying information describing stored video files comprises:

playing at least one audio file.

10. (original) The method of claim 7, wherein said displaying information comprises: revealing at least one data pop-up configured for a user to obtain additional information for at least one stored video file.

11. (original) The method of claim 10, wherein said at least one data pop-up is a polyhedron having a media thumbnail associated with at least one face of the polyhedron.

12. (original) The method of claim 11, further comprising:

rotating said pop-up to reveal a thumbnail of said polyhedron disposed on a face of said polyhedron that is initially hidden from view.

13. (original) The method of claim 11, wherein said data pop-up is a cube having media thumbnails associated with faces of the cube.

14. (original) The method of claim 11, wherein said media thumbnail is selected from the group consisting of: an audio thumbnail, a still picture, and a video clip.

15-60. (cancelled)
